

# URANOSCOPIA.

NO WHARTON OF NAVVORTH:

BYT AN

ALMANACK & PROGNOSTICATION.

Or a Prospective Glasse for the  
yeare of Christ, 1648.

*Qui est Annus ab astrorum creatione Keple-  
rianus 5641.*

*Being the fiftieth or Leape yeare.*

In which you may view the whole State  
and condition of the same, and wherein  
all the Lunations, planetary motions, Con-  
junctions, Aspects, and Configurations, together  
with Eclipses & their effects are Astro-  
logically handled.

Calculated exactly, and composed for the  
Latitude of 51. degrees, 32 minutes, and Lon-  
gitude 24 degrees, 20 minutes, agreeing  
nearest to the Meridian of the most  
famous City of London.

Autore Joanne Bookero ꝑib. Calico.

*Cum canerem Reges, & Prælia, Cynthia's auem  
vellit, & admonuit, &c.*

LONDON, Imprinted by J. I. for the Company  
of STATIONERS, 1648.

Ad amicum suum AUGUSTINUM.

Τὸν ὑπαγορεύοντα.

**C**aeli volumen qui macris artas tuas  
 Ingens tabellis, & Mathēsin sydeream  
 In marginales qui coactam angustias  
 Pannosa venditas gregi quem toga tegit,  
 Fare age! minuto quid palatia superum  
 Aſſe colis? ac inter Quirites audicus  
 Potimicantis, ſat pudenda ſordidis  
 Terrae inquilinis, indigena aperis chori  
 Mercede ſata? Nec Venus libidinans  
 Impuñe rabioſam fibrā immiſceat  
 Temiginem humanis, ſui nec orba fratris  
 Phæbe laborans, uſq; nigricante ſinu  
 Velata terræ ſileat, Entheus at ſuor  
 Te protinus agat, tunc tremenda Deūm, omina  
 (Te vate) reſſuentes territant aures: miſera hæc  
 Dum plebs diū formidat, aſidue patitur.  
 Promouit querelam hinc tēt nūmārū ſidicula  
 In ſurta quod non parcior Cyllenius  
 Peccatus acuat, quod cruentos præparet  
 Ludos Gradiū ſolitario ſerox  
 Et culminans Cælo, benigniore neſq;  
 Nullo ſit a Iove fractus. Hoſ tibi præſcia  
 Aperiti timores mens; Prōphanum an iat pecus  
 Sciāt Deorum ſacibus Orbium minas  
 Patere? conſcijs nec ultra ſydæra  
 Abefſe vindicem? piē ſic Faridicus  
 Placeas. At interim ſatrum quodq; penetræ  
 Non ipſe Phebus (pace dixerim poſi)  
 Ignosce ſapienti, bonoſq; peccūſ; hic  
 Vagantium videt ſacum tyrannidem;  
 Plenus Deoque conſulit ſeſe; ſibi que  
 Cælum ſuas miratur influentias  
 Sint hæc Ephemeridum tuarum ſenſa, ſic  
 Sæciūſ; & Blattarum, edaciſq; Tineæ,  
 Curru quōtannis geſties Phæbi comes.

## Ad amicum suum A U T H O R E M.

Aud improv'is gaudebunt Astra triumphis  
 Frustrabunt decreta viri, si tristius aequo  
 erras scire parent, Documenta dedere  
 Caelo vates: resonant Oracula terris,  
 Illas intrasse Domos, secretaque fari  
 vetuisse juvat. tractas commercia magna  
 hecypos imitant, patres, sublimia tentas,  
 tuat Ars tenui, tua dum sit clausa libello  
 amem Atlantem loquitur Pigmæa Tabella,  
 Cælum cervice ferens, extendis in ævum  
 ævum nomen stellis super æthera notum,  
 nuus iste liber vigeat: sed Fama perennis.

## To the SAME.

O luminous Heavens are epitomiz'd here  
 To show th'exact Description of a yeare.  
 raise thy knowledge which aspires thus high,  
 and handleth subjects far above the sky,  
 Heavens are thy Bookes, nor can thy Comments erre  
 once in each Page th'art guided by a Starre  
 yet should they faile, thine eyes might leade thee next  
 to the Authors Throne who sits above the Text  
 and view's his works, though angry much to see  
 mortals deprive it of it's dignitie,  
 filling those glorious and ætheriall Kings  
 with vaine Spectators of interiour things.  
 He gives them pow'r, in moving to encline,  
 and Man a pow'r, from their pow'r to divine  
 in Gods rare works, who doth most strictly gaze,  
 He attributes most to the Makers praise.  
 What doe we owe to thee then that from high  
 dost stoop thus humbly to each vulgar eye.  
 now that thy fame shall live: And spite of jarrs  
 thy worth shall place thy Name above thy Starrs,  
 While others blush to see what Art they lack  
 they write their follies: thou, the ALMANACK

| 22                    | 23 | 24 | 22                    | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 |    |    | 22                    | 23 | 24 |
| 25                    | 26 | 27 | 25                    | 26 | 27 | 28 | 29 | 30 | 31 |    |    |    |    |    | 25                    | 26 | 27 |
| 28                    | 29 | 30 | 28                    | 29 | 30 | 31 |    |    |    |    |    |    |    |    | 28                    | 29 | 30 |
| 31                    |    |    | 31                    |    |    |    |    |    |    |    |    |    |    |    | 31                    |    |    |

The use of these easie Tables is thus: If you know the day of the Month you  
have the age of the Moon against the same, which if you seek in the highest col-  
umne in the other table you shall find underneath h. hou. & min. the time of full sea or  
high water that day of the month at the place desired. As for example, the 1. of  
Janu. the Moon is 16 dayes old, I would know when it will be high water at Lon-  
don Bridge. I look on the other side for London & find it in the 5. Columnne (or point  
of the compass) & right under 16. the age of the Moon I find 3. hou. 48. min. which is  
say. it is high water at London bridge the 1. of Jan. this year at 48. min. past 3  
the clock in the afternoon & morning. Doe thus with any other place.

# February hath XXIX. Dayes.

Now *saturne* passing neer the *Pleiades*  
 Squaring with *Sol* and *Mars*, will much displease,  
 These are by *Jove* oppos'd: I wish no stir  
 Twixt th<sup>e</sup> *Independant* and the *Presbyter*,  
 Ther's but one truth; good God discover that,  
 Least we contend about we know not what.

# April hath XXX Dayes.

The *Sun* and *Jupiter* in friendship joyne  
To glad the hearts of Men they both combine,  
Let us rejoyce ; It is the pleasant Spring,  
The Fields and Trees are greene, Birds sweetly sing,  
I wish it last, I feare 'twill alter soone,  
All things *May* change, that are beneath the *Moone*.

# May hath XXXJ Days.

The tow'ring Mountaines, and the Cedars tall  
Are rent with thunder, when the lowest Vale  
Is free: It is not greatnesse, strength, or power,  
Can shield from vengeance, when wrath gins to lowe  
Happy his state above the fate of Kings,  
That knowes the cause and the successe of things.

# June hath XXX daies.

Winds may be lowd, But secret muttering  
Of home-bred Vipers Treasons uttering  
In private holes: Tis time to looke about,  
And having found such villaines, turne them out ;  
We have oft been warn'd, and learn'd, That too much pitie  
(The case is ours at present) spoyles a City.

The Roman account

ten days before ours

The true account

to the year 1734

Naseby battell 1645.

Oxford yeilded 1646.

July

# July hath XXXI daies.

Nature her gifts insensibly bestowes,  
 Her influence she distills on all that growes:  
 What can we wish? what can our hearts desire?  
 Give God the praise: The Stars themselves conspire  
 To shew their bounty: A joynt gratitude  
 Even forces blessings, like a swelling flood.

The place of five of the Planets and Dragons bear every five daies in July.

[illegible]

# August hath XXXI daies.

The Planets shift their places; 'Tis not strange  
If in the World there be a wondrous change.  
Stars are by various motions through twelve Signes,  
Sometimes in *Sextiles*, *Squares*, sometimes in *Trynes*;  
Sometimes *conjourn'd*, sometimes *oppos'd* they be,  
When they doe love or hate, then so doe we.

September hath XXX daies.

*Hermes* bestirs himselfe, he's now put to't :  
Succeed all well ! Great counsels are on foot.  
There are a sort of men that vilifie,  
Speake, write like fooles against *Astrology* :  
Shall I forespeake such men? it is their luck  
If they persist, they will be Planet struck.

# October hath XXXI daies.

Expect some sudden stormes and troubled skies  
When *Spica virginis* doth with *Sol* corise  
And culminate; which *Hermes* doth augment.  
Besides I feare Domestick discontent,  
Which lustfull *Venus*, thievish *Mercury*  
Squaring with angry *Mars* doe notifie.

November

# November hath xxx daies.

Venus and wily Hermes hand in hand  
 Consult together Saturne to withstand  
 And fiery Mars with Sol at variance  
 Gives warning, 'tis no time of dalliance,  
 Heaven shield from danger, whoſo'ere he be  
 That hath the Moon eclips'd in Gemini.

December hath XXXI daies.

I like not fullen *Saturn's* hatefull *Square*  
With brawling *Mars*, who thus disturbs the Ayre.  
Men may a while scape punishment from sin;  
*Justice* pays double when she doth begin.  
Is your Cause good, and *Innocence* your friend?  
Be not dismayd, it will be well i'th' end.

1649. January

*As thus we are form'd, Head, Neck, Arme, Breast, Heart, W  
Loynes, Secrets, Thighs, Knees, Legges, Feet, Earth's our  
The Twelve Signes, Verse.*

*Ar. Tem. Gem. Can. Le. Virg. Lib. Scor. Sag. Cap. A. u.  
Y. 8. U. 5. 9. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100.*

*Sex in lesse dies, Ter suna in  
Sanguine trini,  
Bis sensu carmen, Ter sensu membra  
figurant.*

*The first six dayes, like milk, the  
fruitfull seed  
laid in the wombe, remain-  
eth still;  
Then other nine, of milk, red blood  
do breed,  
Twelve dayes turn blood to flesh,  
by Nature's skill;  
Twelve more firme parts, the rest  
ripe be: do make,  
Such shape and forme, in time,  
man doth partake.*

After logers doe attribute the first moneth after the Conception to the Planet *Saturne*, whose influence the Seed in the Wombe is retained and fixed: The second moneth to *Jupiter*, who gives increase to the Seed, and layes the foundation of the Senses and Motion. The third moneth is proper to *Mars*, who adds heat unto the Infant, and prepares it for life. The fourth moneth the *Sun* challengeth as the author and moderator of the vital Motion. The fifth moneth is given to *Venus*, who is signification of comlineesse and beauty. The sixth moneth is appropriated to *Mercury*, by vertue of whom the members of the young child were conuexed, are now separat, and distinguished. The seventh moneth is bestowed on the *Moon*, who completes the child in the wombe, makes it perfect, filling up the clef and crannies in the body, opening the passages by which it is brought to light. The eighth moneth in this moneth may live by reason of the comlement, or fulfilling of the motions. But if it happen one to be born in the eighth moneth, they are most part either dead, or lives but a short time, by reason the disposition is returned to *Saturne* again, who is enemy to Nature, in all his qualities: And therefore the most frequent and natural man is deferred to the ninth moneth. At which time the benevolent Planet *Jupiter* takes government again upon him. In which perfect birth the *Moon* returns to the signe she was in at the time of Conception, or the opposite thereof, or to the Planet with whom she was in conception, or his Affect, or to the Sign wherein she was then, and looke in what sign she was in at the birth, the same Sign was Ascendant at the conception, And that Sign is at the conception, either that or the opposite is the Ascendant at the Birth. *Præcep. 1. Centilog.*

*The seven Planets, Vers.*

# A PROGNOSTICATION,

BOOKER 1648.

*E. Iupiter quidam scribitur placet*; one man will buy all Almanacks; another man having read Master *De Witt* in Divinity and celestiall and Orthodox opinion in Astrology, will as many others otherwise learned enough, of such sort, and unable or unwilling, to reach the depth thereof, will have none at all; one man will have the Rayes, another the Highwayes, when the old Almanack will serve for such a purpose, these being the essence of the Art; some care for nothing but the of the Months; others will have no Latine in an Almanack; the stupid ignorances, and blockish stupidity of some, he do in the manger, that will neither eat themselves, after the Ass; but would have as very dunces as they. This man will know nothing but when to sow, see, plow, &c. Another man would know all things in this state, Comm. wealth, &c. This mans ground is hilly, mountainous, and he fears not *Asperio Pertanus*; no other comes amisse to him. That other mans is champion, in the valleys; if it should be foule weather he waine, when will it raine? saies one; by and by, saies another, how long will this same weather last? I would have it raine this day, this weeke, this fortnight, this mth. I have a great journey to go, this or that busines to do. One is for *Holland*, and a West wind is for another for the East, the West Indies, when will the be turne to the North, to the South? how long will it be in this corner? Now, if I might have my wish, I heartily desire the winds blow one way till sufficient relief and supplies were sent, that the Rebels of *Ireland* were subdued, and God send the Enemies of the King be shipt to such a place, from whence they may never come to breed any more division amongst us. &c. *Velle*

*sum cuique est, nec voto vivitur uno.* And this I daily  
riment, *2. nōd hic cam fastidio repulsat, alter ambabus*  
*placitur.* And I may very well say with *Horace* :

— *Non omnes eadem mirantur, amantque,  
Carmine tu gaudes, hic delictatur lambis,  
Ille Bionois sermonibus, & sale nigro.  
Tres mihi conviva, propē dissentite videntur,  
Pescense Vario multum diversa Palato :*

I suppose you believe I can english it, and in verie  
I will not wrong the Author, but leave it pure to  
understanding of him that can understand an Almanack  
could fill up this limited third sheet with compleat  
abundance. The ignorance of some, say many a  
man, saies we lye on our backs all the twelve daies  
Christmas, on the house top, or some high place, &  
so judge of the twelve moneths of the yeare. But what  
we do now, no more Christmas Pyes, no more Plum-Por-  
And in verie deed you may as well foretell, what weather  
and other strange things, by Shrovetide day, or the  
Tuesday in evey of the twelve Moneths of the yeare,  
any of the twelve daies, or other day when your Shops are  
up, and more certaine. Oh the impudence and malice of  
who thinke themselves no fables, who charge us with  
many a witchcraft, Sorcery, &c. I would all such were in  
land. I am even forced to write thus much; For having  
ved of late yeeres the various disposition of men in  
choyce of Almanacks (which is of as universall and da-  
at any three sheets of paper.) For three sheets will not re-  
quire, and a reame will not containe matter enough for  
basie spirits; the fault is in some Artists and long Practi-  
(perhaps now dead) who for many yeeres together, have  
countenanced and licensed, by as ignorant as themselves  
have mistaken one Lunation for another, the full Moon  
the new Moone, halfe a dozen houres in the time of high  
ret. With many other such absurdities that the harmlesse and  
excellen<sup>t</sup> Art hath been scandalized, and the Artists gra-  
abused, and most wrongfully suppress, fined immeasurably,  
unjustly imprisoned, as my selfe was *June 1634.* I would  
that can write of no more then Faies, would make  
what trading of late hath been at home in *London*, or abroad  
*Windsoll, Exeter, Holden, Lincolne, Sturbridge, &c.* And he  
can write of no more then high wayes, would forbear to

I daily  
abus  
of foule or faire weather: but let him shew his skill  
vey the Kingdome. I hope the times will be more quiet;  
a man may peaceably passe thorow it with a white wand  
and, and bracelet of gold may hang in the highwayes  
e, a in King Alfreds daies Anno Christi, 872. it was.  
within this halfe dozen yeares the ordinary paths have  
obstructed, that an honest man, to avoid a knave or a  
red ruffians company, (such a one as hath two names,  
th, or a Wha, (20) hath been forced to make one mile  
and five twenty, and glad he could escape plundering.  
ach by the way, and now to my accustomed roade. Et si  
magis paginas: as benigno animo evolvere non dedignetur:  
seriam sidera vertice. I nely let me now give you notice  
of Lillies Introduction to Astrology, which I promised  
last yeere, is by him compleatly finished and published:  
brate worke, whereof all manner of Astrologicall que-  
are resolved, and judgements upon Nativities artificial-  
dled.

the severall parts of this yeares Almanack explained  
in every Moneth.

the left hand page thereof you have in the first  
Column the dayes of the Month, in the second is  
the dayes of the weeke, B. being Sunday letter  
the 20. of February. after which A. is Dominicall  
to the end of this Leape yeare. In the third Co-  
lumn are the remarkable dayes used in England, the be-  
gining and ending of Termes, the conjunction of the  
Moon with the Planets, by observation of which they  
easily be knowne; As likewise the Orientality, and  
Occidentality of the Planets, with the degree, and  
latitude of their latitude North or South, ascending or de-  
scending; this example may cleare all the rest. The fourth  
column of January in the said third Column I finde these  
characters, h occ. lat. 2. 7. S. D. which is as much to  
say as Saturne is 0. occidentall, or may be seene after Sun-  
set, and hath South latitude descending 2. degrees, 7.  
minutes. So likewise the fifth day I finde these Cha-  
racters, 4 lat. 1. 16. N. A, which shewes you, that day  
Jupiter

Jupiter is orientall, or may be seene before Sun seth  
hath latitude North, ascending 1. degree, 16. minutes  
and so in course throughout the moneths, every of  
nets must be thus understood. In the fourth  
you have the degree and minute of the Zodiacall  
signe the Moone is in every day at noon. In the  
lunne is the denomination of the Moones latitude  
in the fifth the degree and minute thereof at noone.  
Seventh you have the houre and minute of the  
every day in the yeare, which if you double you  
length of the night; but if you substract the Sun  
from 12. the remainder will be Sun set; and if  
ble the houres and minutes of Sun set, you will  
length of the day. And you must observe, that 60.  
make an houre; and note further, that as many  
the Sun riseth before 4, 5, 6, 7, 8, 9, } a cle  
so many minutes he sets after 8, 7, 6, 5, 4, 3. }

The eighth and last Columne is the new, full, and  
ters of the Moone, the signe and degree of the Zodiacall  
Poleosopical at the time thereof, the chiefe  
every such Linnation, the most forcible Aspects  
calculated; the disposition of the Ayre, and other ob  
tions fitted to these times, and without sensible  
agrees ble to a 1, or any part of Great Brittain or

The right hand or blanke page doth sufficiently  
cover it selfe by the directions therein inserted, and  
much for the generall use of the Almanack; now  
Diagnostick part, or that which is vulgarly called  
Prognostication.

### Of the Spring.

**T**he Spring takes entrance with the Sun in Aries  
yeare, on Thursday the ninth of March, 33. minutes  
past 8. of the clock in the night, at which  
of time the 26. degree, 41. minutes of Libra is  
pical, the Moone departing from a fertile of Mars  
to the conjunction of Venus, significatrix thereof in the  
house, or Angle of the North, Saturne is in the  
house, Jupiter in the tenth, Mars in the fifth, and  
and Mercury on the cusp of the sixth. In the full  
vrbensionall, which happened the 28. of February, the

mini effects, and Mars and Mercury are very near to  
 in the 11. house, opposed by the Moon, and Venus  
 illuminating, yet the Moon devolveth to the Trine of  
 the. At the new Moon positiuefall the 14. day of  
 ariseth the 2. degrees of Taurus. In the Ascendant  
 the Pleiades, Mars, the Inimicaries, and Mer-  
 in the 11. House, Venus in the end of the 11. and Ju-  
 in the beginning of the 6. From which severall  
 tions, and the powerfull dominion of Mars, princ-  
 of the year, with whom in Commission is joyned  
 as Secretary, and Saturne as Counsellor, may be  
 Astrologically, that diuers kinds of troubles and  
 mites are very like to happen in diuers places and  
 eries, secret and under hand dealing, treacherous pra-  
 to betray trusts reposed, cosenings, deteies, pol-  
 , and pilling, extortion much practised, charity  
 amongst friends and kindred frozen, fidelity of ho-  
 , one man scarce trusting another.  
*Inegritas, sin-era fides candorque recessit  
 elle sunt lingue, pectora felle timent.*  
*Federa, contractus, commercia, pacta, forumque,  
 mille sophismatibus perversa, mille dolosa.*  
 the position of Mars as he is chiefe in this Revoluti-  
 and Lord of the year, in the plenilunium preventi-  
 in the 11. House, in conjunction to Mercury, in op-  
 tion to the Moon, gives small hope of gain, or profit  
 rise from matters hoped for *Ex parte regum*, much em-  
 amongst friends, and consumption of their treasure,  
 position in the revolution in the 5. House denounceth  
 fornication, and Adultery, and spitious births,  
 tality in the Southerne parts, death of great and  
 Personages, some detriment to, or the scarcity of  
 his meridionall latitude causeth abundance of Lo-  
 , or such harmefull creatures; and his Occidentality  
 trouble persons of high Fortunes; thus the position  
 Saturne, this revolution in the 8. House, and in the  
 ilunio positiuefall in the Ascendant both bring  
 detriment and losse to that region or place, and  
 people that are subjected to the signe, he is now po-  
 in, which is Taurus, amongst which Ireland is notthe  
 much tribulation and anguish amongst such people,  
 by contentions and Law Suits for matters of inheri-  
 , and dead mens goods, great sorrow to happen for  
 , the death of men, and though diuers shall obtaine those  
 goods

goods they have gone to Law for, yet shall they prosper, but probably be consumed, and come to the people waring poore and needy by their owne. In this Revolution on the 29. of March, about 9. minutes past 9. in the morning, there is a great Aspect of two Superiour Planets, viz. a Square of Saturne and Jupiter, he in the 29. degree, 47. minutes of Taurus, this in 29. degrees, 47. minutes of Leo retrograde Saturne in the 11. House, Jupiter in the 3. receive much breach of friendship about high matrimonial points of Religion, and a corrupt Clergy, likely to be; and the declining SENTRY very much distressed at least craving much helpe but little regarded, his merit deserved, for pride must and will have a fall. In May happens many notable Aspects and conjunctions, as the 2. day a Trine of Jupiter and Mars, the 11. day a Quartile of the Sun and Jupiter, the 12. and 13. day a conjunction of Mars and Mercury, the 16. day a meeting of the Sun and Saturne, the 24. day is a conjunction upon Venus, and the 25. day Mars and Venus consultation; all which are evident testimonies of Action, and a bustle time, I beseech God grant peace quietness, and preserve the fruits of the earth from injury of blakings, murtheres, corrupt Manners, terrible Showers, Thunder and Lightning, the deadly Caterpillers, and such like destructive Terminations.

Degenerant partes murati enormiter Anni,

Mensibus Estivis frigida torpet Hyems.

Of Summer.

Summer takes beginning on Saturday the 10. of 10. minutes past 11. of the clock in the night, at the time the glorious Sun entering Cancer, the 20. quarters of an hour after being in conjunction with the very first minute thereof, darkens his brightness causing a great and fearfull Eclipse in the very Indian of those people that inhabitate and reside in the extremities of Asia, neare the Straights of Anian, and home of Quivira, and those unknowne Regions to the longitude of 194. degrees, and Northerne latitude 47. degrees. At this ingresse all the Planets are calculated thus hastening to the conjunction of Saturne whom he agrees as an old man of loose loose Circle of liqrency, non bene conveniunt, nec inhorantur, lasciva virago, cum viro casta 10. Mars 12.

this quarter in the end of Taurus, but God sends a  
 Cow host homes, there are close and private mischie-  
 felines on foot, God-grant we perake not of his  
 and spare not of Saturnes treachery when they meet  
 her at the latter end of June: if such Claspers as Berk-  
 and, alias Aplicus, Taylor, alias Aquaticus, but above  
 Laworth, alias Wharton, who is neither Merlin, nor  
 ary, whole Almanack for this year 1648. being  
 ight to me to peruse, I found amongst others his most  
 ched observations these words in red Letters again  
 nth of January, Decoll. Gnil, Laud, Arch Cant. Martyr,  
 ch doth in most vile manner abuse the Parliament,  
 their legall proceedings, but if the Lic. nse, or ra-  
 suppression together with his Almanack be printed,  
 what will not some men doe, you may easily perceibe  
 spirits of these men, if I say such were not harbor-  
 n London, (who can never sufficiently compound, or  
 satisfaction) we need not be afraid of their treacherous  
 s, nor durst those Cavaliers, amongst whom they are  
 great esteeme, dare to be seene any where but a-  
 ght Knaves; but most lamentable it is that such men  
 countenanced, upheld, rewarded, imployd, whose  
 endeavours have been, and is to put all in comba-  
 n, daily rayling at the Parliament, the State, and  
 ernment of this City, raise Tumult, frame, print, pub-  
 and spread abroad such things as were never, or are like  
 er, inflaming the braines of the monster-headed mul-  
 tude, by their scurrilous discourses, and scandalous  
 mpblcts, with division, distraction, rebellion, endea-  
 ring to bring us all into a confusion, of which of late  
 have had sad and lamentable experience, to the decay  
 Trade, disquiet of peaceable men, heart burnings  
 amongst one another, and feare of generall uproares  
 tumults throughout the Kingdom.  
 Factio districtor in mœua vulnera Cives,  
 Armat, & alterna clade dat exitio.

### Of Harvest.

Harvest initiateth on Tuesday the 12. of September,  
 8. minutes past two in the afternoon. I should very  
 like this moneth, and the revolution, by reason of the  
 conjunction of the Sun and Jupiter, Jupiter and Venus,

the Sun and Venus, Jupiter and Mercury, but the  
 detaching from a square of Mercury, to an oppo-  
 sition, and square of Jupiter, makes me bring  
 here: And instead of the Justice and bounty of  
 and the Sun's magnificence; the chaire, magni-  
 tude, and fertility of Jupiter and Venus, and the  
 Sun; the discretion, wisdom, and other good  
 from Jupiter and Mercury, *Est contrarium quod quod*  
*est in loco donationum, & bonorum contrarietate*  
*frangitur censu, & ab seindenter via mercatorum,*  
*gent, & apparebant rumores mali, tollitur bonum &*  
*in malum* The Moone thus afflicted with Cancers  
 or the Dragons tale, and opposite to Saturne, gives  
 warning of some notable accidents very trouble-  
 some and ambitious Monarchy: I pray God the King  
 sitting thither, suffer not much by them, forwarde  
 armed, certainly some breach of friendship, or false  
 hand dealing is intended, breach of Covenants,  
 and Contracts, much falsity and lying, contentions  
 upon, and at last some effusion of blood; The ayre  
 cold and cloudy, if not corrupt and pestilentiall; and  
 is the more to be feared by reason of Saturnes  
 present, and Stationary Retrogradation incident  
 a Planet retrograde is most malicious and unfavourable  
*Ex nocebit nimis.*

### Of Winter.

I feare me Winter will seize upon us this yeere  
 when we would have it; for certainly the opposition  
 of Saturne and Venus, of Saturne and Mercury,  
 the Sun and Saturne, together with an Eclipse  
 Moone in November (of which more anon) and  
 other notable configurations, and a double con-  
 junction of Venus and Mercury in the said moneth, and  
 pent arguments of cold winds, flabby, rainy, and  
 dreary weather, naturally Winter begins when the  
 enters Capricorne, which is this yeare on Monday  
 of December, at 8. minutes past 2. in the morning  
 rising of the Ascendant at that time, and  
 Moone going from the opposition of Mars to the square  
 Venus, causing an *Aposio portusum*. The seventh of

is a most hatefull square of Saturne and Mars,  
 being much Thicks, Robberies, and violent q-  
 ueries in the Englishes, to happen this yeare about this  
 time, not to much because Christmas is so near, but the  
 nature of men is to great  
 lapis abque manu de monte revulle superat:  
 rumpe mora, cunctis corripe, Christe veni.

### Of Eclipses happening this yeere.

At times shall the Inhabitants of the Earth be  
 deprived of the light of the Luminaries, twice of  
 the Moone, and twice of the Sonne. The first of the  
 Moone happeneth on Friday the 26. of May at our noone;  
 by reason of the great latitude of the Moone southerne-  
 ly, will not be visible to us, onely our Antipodes and  
 they shall behold it in their midnight such as live in the  
 boome of Anian, in the most westerne part of Mexi-  
 co; and in the Island of Cuba, Alomon, and new Guinea,  
 in the longitude of 111 degrees to 291.  
 The second Eclipse will be of the Sun just as he en-  
 ters the first minute of Cancer, which is on Saturday the  
 1. of June just at midnight with us, which must needs  
 be visible to us; I gave a little touch thereof in the  
 description of the Summer Quarter, certainly if E-  
 clipses have any operation this must needs shew it selfe in  
 that measure, in regard it happens just at the Sol-  
 stice in a Cardinall Signe, and in the Center of mid-  
 wen, to those inhabitants where it is to be seene,  
 being Antipodes to them, I forbear to mention any  
 further thereof, in regard it is observed, that Eclipses  
 operate not so forceably in those places where they are not  
 visible, as otherwise they doe.

The third Eclipse will be of the Moone, and be seene  
 as we be in England (if the Ayre be cleare) but in  
 respect I much doubt it, by reason of the nearnesse  
 of the Eclipsed Luminarie to the body of Saturne, and  
 the Sun in opposition to him causing a very great Apertio-  
 n of winds, rain, and a great distemper in the  
 ayre, which if not then incident will not be long ad-  
 vancing; I am sure though we see it not with our eyes, it  
 will cause many to shed teares for the sad effects  
 thereof.

Booker. 1648.

The beginning of this Eclipse happens on the nineteenth day of November (a remarkable day) nominally the 16. houre, 49. minutes past noon. We account the twentieth day 41. minutes past clock, being Sunday morning.

The middle of this Eclipse is at 31. minutes past the clock in the morning, the position of the bright face of the Moone (if visible) being at that followeth.

The digits or parts of the Moone darkned will be 1. and 1. minutes, and it will appeare of a blacke color with a pale rednesse mixed. the latitude of the Moone being 33. minutes, 52. seconds Meridionall, or descending, the end of this Eclipse will be at 17. minutes past 8. in the morning, the Sunne will rise the Moone setting: the whole continuance will be 33. minutes.

The effects of this Lunar Eclipse continue in force, effect, strength, and vertue (caveant scribe) daies, taking their beginning from the 18. of October being Saint Lukes Day, 1649, a week before the coming of Michaelmas Terme, and continue till Christmas.

tion is the third day of February following, in Hil-  
 leary. And this is according to the long recei-  
 mon, and experimental Rule of Ptolemy, who  
 That in an eclipse of the Sun, so many houres as  
 is eclipsed, so many yeares will the effects continue,  
 the Moone be eclipsed, so many houres as she is  
 eclipsed, so many months do the effects thereof last.  
 At the beginning and end of such effects, the Angles  
 of the Heavens are considerable. For saith he, if an  
 angle shall be in the East Quarter of the Heavens, the  
 effects shall begin about the foure next months  
 after the Eclipse. If in the mid heaven, or South-  
 quarter, then the effects do not operate till about eight  
 months after the said Eclipse; and if in the West quar-  
 ter, then the Eclipse sheweth forth its effects about  
 six months after its apparition: This last agree-  
 with our position of Heaven, at the middle time  
 of, as you may easily observe in the Figure of  
 the same before mentioned. But let me use the words of  
 Ptolemy in Part 3. Ephemerid. de effectibus, lib. 466. viz,  
 cum qua queri possit, ubi effectus Eclipsis tam diu lateat, ut  
 tantum tempus demum sese exerat, non immerito hac  
 maxima doctrina in dubium trahitur, consentanea nam-  
 est Eclipsis statim operari & effectus suos, aliquosque ex-  
 erere. And I know no reason, but as in all Lunations,  
 the new Moons, full Moons, or her other Quarters,  
 Judge the time of the Ayres meeting on, and other  
 things, by the application of the Moone, who is the  
 chief Planet, and immediately conveys the influence of  
 the heavenly Bodies to us) to the conjunction of other  
 long Aspect of beams of the Significators, and at such  
 time usually as such meeting is; Then do the heavenly  
 bodies powre downe their influence, good or evill, as  
 we call it, upon all such creatures as are capable  
 thereof.

And if we observe at the middle time of this Eclipse,  
 the full Moone, she deserveth from the opposition of  
 the Sunne to the conjunction of Saturne, and immediately  
 after to the opposition of Mars, and then to the opposi-  
 tion of Mercury, who is the chiefe and domineering Planet in  
 this Eclipse, for it happeneth in the 12. degree, and 45.  
 minutes of Gemini, his diurnall House, wherein besides  
 hath a triplicity, as likewise in the Angle succeeding,  
 which is the midheaven, being the 13. degree of his diurnall  
 use.

house and his exaltation, on the cusp of the house nearest to which the body of violent and furious Mars, being Ascendant of the Ascendant, being in the degree of Scorpio, these two together have the best effects of this Lunar deflection: I should be glad if they should fall upon me or any my good friends, in the place where I live (London being under and in the Eclipse Sign) let them be what they will, I am subject to Gods will, and the Sun, Moone, and all his instruments, part of his Militia, by whose virtues and rules all the world, and brings it to pass. The Ancients have delivered, and many ages ago it most true, That if an Eclipse of the Moone be the first ten degrees of Gemini, Sacerdotibus, & in ordine sacris initiatis, dissensionem, lites & seditiones, agros infanda, legum contemptum, & pietatis etiam neglectum. Et incursionem & rapinas hostium minatur, Haly de rationibus planetarum, Cap. 23. Fol. 190. falth, Quando eclipsi obruit Saturnum & cooperit eum, morietur Rex magni honoris in terra occidentis, who this may be I cannot be determined by the future effects of this defect. falth, Significat destructionem vin, multas infirmitates in nobis, & egritudines, & bubones, significetiam eadem nam inter reges & vulgus, & multum malum, multas advenientes regibus propter inobedientiam militum eorum multas guerras. For my part I doe beleve, and plainly appeare; nay, Constat ex Creationis descriptione mundi magni illius opificii Architectum magna mundi lumina creasse, & constituisse, ut die & nocte luceant, dominentur; tempora suam exerant. Tempora Dies, menses, & Annos efficerent, distinguant, inferiora sua mirabili & vegeta virtute afficerent, they are signes and tokens of great matters and actions, Quod rerum sit illa miracula, opera admiranda ac Judicia quæ Deus in sole edidit virtutem confirmant, so many of all Ages, and manifold experience witness. Eclipses enim Luminum magnorum, magnorum quoque even- ptehuncia fuisse atque magnas Regnorum mutationes, mæstus, Agrorum sterilitates, Diluvia, Bella magnorum domum, ac Principum, quorum Sol imprimis symbolum est, & roinarum Reginarum, &c. quorum Luna est significatrix violentam & siccam denunciasse, what may be gathered Diognosticated from the face of Heaven at this Lunar eclipse, I leave to be judged by those who have made

from such like Celestiall positions which have happened  
 Gemini. Indeed this Eclipse of the Moon happeneth  
 to that part of the Zodiacque in which the Sun  
 eclipses the 21. of May, about 4. of the clock in the  
 year 1639. Since which time I leave to all the world  
 to wonder, what wonderfull and strange distractions  
 hath befallen this Kingdome: how many thou-  
 sands of lives and livelihoods, what contention in matters of  
 state, and indeavours to alter the government; what a  
 waste of idle, scurrilous, and needlesse Pamphlets have  
 been abroad; truly this Eclipse happeneth in the 8.  
 houses of Heaven, Quatuor significationes sunt multe  
 & interfectiones, multa bella, & rumores; legum  
 & in quibusdam sectarumque mutationes, multa concupiscentia in  
 nubibus, et impregnatio multa, &c.  
 may be offended that I have not englished those places  
 which are in Latin, they may thanke their covetous or  
 idle friends who have brought them up better fed then  
 they are, and this may be a sufficient warning to them, I  
 do not why we should humour every man, or force  
 a more understanding then he is capable of. But let  
 such, and whosoever it concernes, that this E-  
 clipse will spare none, from the highest to the lowest, from  
 the Palace to the Prison, on whom it hath any influence,  
 whole places or people that have the Sunne, Moone,  
 or part of Fortune in their As-  
 cendant, or Revolution thereof, or any direction of their  
 Aspects signified from 4. degrees to 13. of Gemini,  
 or Virgo, or Pisces, shall in a divers manner and sort  
 be affected; I neither name or threaten any, but if God  
 be more mercifull, and men make timely repentance, I  
 am sure it will be a sad time with some, God help them,  
 every man sweep his owne doore, and the streets will  
 be cleane. Truly, the streets are as dirty as the  
 faces are sinfull; And who is to be blamed? They are  
 to be named: I will onely give you thus much notice,  
 the Countreies subject to this Eclipse are as follow-  
 eth. Under Gemini, Sardinia, part of Lombardy,  
 South and West part of England, part of Flanders,  
 part, the Dukedome of Wittenburg, Hircania, Armenia,  
 Parthia, Cyreniaca, Marmarica, Egypt the lower, &c. These  
 places likewise, Corduba in Spaine, Vitenbium Caelna, a City  
 in Lombardy, Twin, Vercelli, Rhegium, Lovaine, Bruges in  
 Flanders

Flanders, London, Mentz, Ritzing, Hasford, Bamberg, cum, Noremberg, though Schoner and Cardan say, it der agitary, yet Gaezus proves it for many under Gemini.

*Under Sagitary these Countries.*

Spain, Dalmatia, Slavonia, Hungary, Moravia, Na, Celtica, Thyrenia, Arabia the happy.

*These Cities.*

Toledo in Spain, Volaterra. a City in Hebr Mutina Narbon, Avenion, Colonia Agrippina Coen, Studeard, Rottenburg, Judenburg, Galscovia.

*Under Virgo these Countries.*

Achaia, Greece, Crete, Croacia, Carinthia, Ana, the Du edome of Athens, Mesopotamia, Bab Assyria, part of Gallia, part of Rhync, Sylelia the low

*These Cities.*

Hierusalem, Corinth, Rhodes, Papia, or Pavia, Brundisium, uma, a City in Campania, Arezzo, Na ria a City in Italy, Tholouse, Lions, Paris, Bazil, delberg, Erphord, Uratislayia.

*Under Pisces these Countries.*

cia, Calabria, Portugall, Galicia, Normandy, Ph-  
 ia, Nasomonia in Lybia, Garmantes, Lidia,  
 ia, Egypt the higher.

*These Cities.*

andria, Hispalis, Compostella, Parentium,  
 Wormes, Rarispone.

fourth and last Eclipse is a totall one of the Sunne, on  
 the fourth day of December, but is not visible in  
 of Christiendome, onely seene in the South part of the  
 in the straight of Magellan, and those unknowne  
 people, and therefore I leave it to be related by  
 rakes, Frobishurs, and Cavendishes at their re-  
 turne thence that have syled thither. Thus much for  
 are, onely let me intreat the Readers passe by such li-  
 ghts as may accidentally happen. Let him have a  
 ble aspect from thee that wisheth thine, and his  
 welfare, that desires remission at thy hands for  
 and correction of present errors.

Namque haud parva injuria certè est  
 Si mihi Calcographi crimina des vitio.

A Table

A Table of the Longitude and Latitude  
 of some notable Cities and Townes in England,  
 land, and Wales.

|                | Longitude |    |
|----------------|-----------|----|
|                | Degr. min |    |
| Berwick        | 22        | 37 |
| Bristol        | 31        | 43 |
| Caermarthen    | 20        | 8  |
| Canarvau       | 20        | 8  |
| Chester        | 23        | 40 |
| Chichester     | 23        | 37 |
| Colchester     | 25        | 25 |
| Coventry       | 22        | 45 |
| Cockermouth    | 21        | 26 |
| Cambridge      | 24        | 25 |
| St. Davids     | 19        | 13 |
| Dover          | 25        | 44 |
| St. Edmondbury | 24        | 37 |
| Edenborough    | 23        | 50 |
| Exeter         | 31        | 42 |
| Elamborough    | 26        | 10 |
| Gloucester     | 22        | 11 |
| Hereford       | 25        | 43 |
| Lancaster      | 21        | 55 |
| Leitham        | 24        | 20 |
| Ludlow         | 24        | 46 |
| Lizard Poynt   | 19        | 25 |
| Manchester     | 22        | 0  |
| Norwich        | 25        | 36 |
| Oxford         | 23        | 24 |
| Peterborough   | 24        | 0  |
| Quinborough    | 25        | 10 |
| Rye            | 25        | 10 |
| Shrewsbury     | 21        | 47 |
| Southampton    | 22        | 58 |
| Tinmouth       | 24        | 20 |
| Walsingham     | 25        | 13 |
| Worcester      | 23        | 12 |
| Yarmouth       | 26        | 0  |
| Yorke          | 23        | 30 |

From my House in Creechurch Lane London,

29 July.
